

Re: Interval Sodium Policy Model Call

Organizer Andrew Moran <amoran@resolvetosavelives.org>
Meeting time This event occurred 2 weeks ago (Thu 8/6/2026 3:00 PM - 4:00 PM)
Location Microsoft Teams Meeting
My response Accepted
Required attendees Andrew Moran, David Watkins, William R Garcia, Laura Cobb, Obehi Aimiosior, Zina Abourjeily, mmarklu1, Whitney Adams, Nicole Ide
Message sent Mon 8/10/2026 10:59 AM

Hi William,

Happy Monday!

Thank you for the slides.

The outlined timeline works. I will work to get back to you regarding a report format by Wednesday. Please do not hesitate to reach out for any questions.

Very Best,
Zina

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hi all,

Thank you very much for your comments and feedback. As always, thank you to [@Zina Abourjeily](#) for preparing the meeting notes.

Please find attached the slide deck from yesterday's session.

[@Andrew Moran](#), we suggest the following next steps:

- By next week, please send us the proposed structure for the report, including the narrative, key numbers, and desired elements.
- From our side, we will share the updated and final model estimates.

- Using those inputs, we will populate the report structure and aim to have a draft ready by August 20.
- We can iterate by email ahead of our meeting on August 27.

Does this timeline sound good?

Best,

William Garcia
PhD Candidate, Health Metrics & Implementation Science
University of Washington

Subject: Re: Interval Sodium Policy Model Call

Hi All,

Thank you for a productive call yesterday, and for spending extra time.

Here are the notes. Please let me know if you cannot access the teams summary/recording, but are hoping to review it.

[@William R Garcia](#) Could you please share the slides for our record?

Thanks and have a great weekend!

Very Best,
Zina

Notes

[Full meeting recording and recap](#)

Attendees: William, David, Laura, Matti, Nicole, Zina

Sources of sodium

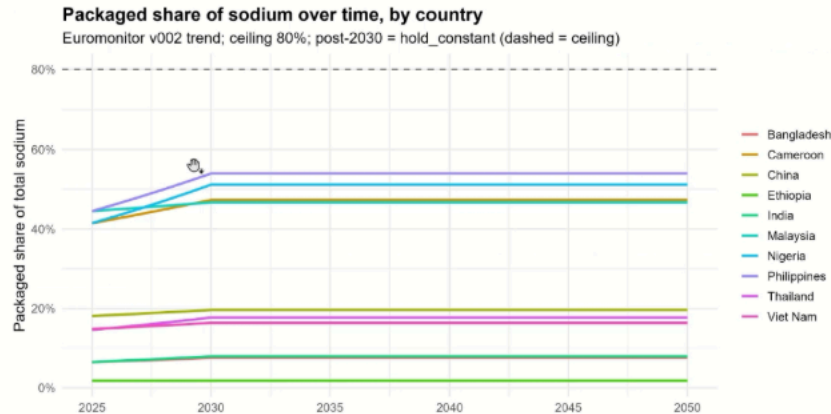

- Matti said he was looking at Nigeria this week

Packaged food trends

- Euromonitor projections only go until 2030, assumed sodium from packaged food plateaus after (conservative) --> recommended approach by UW and Matti
- Matti had previously capped at 50% for India, per India's WHO office; this will not be the approach

Packaged share of sodium over time

Each country's packaged share grows on its own Euromonitor trend to a 2030 end-state, then holds flat (dashed line = the 80% ceiling). The other four sources renormalise each year — a composition shift only.

DW and WG – UW

RTSL × UW Sodium Policy

6/44

LSS

- Mechanistic Modeling Approach: William described the updated LSS model, which decomposes blood pressure changes into sodium reduction and potassium increase, using a 75/25 NaCl/KCl substitution and Bayesian estimates for potassium intake.
- Data Sources and Parameters: The model uses data from Reading et al. for potassium intake and Filipini et al. for dose-response, with coverage scenarios based on NCD risk collaborators' hypertension treatment cascade, making target populations more realistic.
- Technical Discussion on Baseline Potassium: Matti and David Watkins discussed whether baseline potassium intake should moderate the effect, with William agreeing to double-check the implementation and Matti clarifying the modeling choices in their previous paper.

Fiscal policy

- William outlined the fiscal policy model, which decomposes the impact of a 20% tax on packaged foods using assumptions for pass-through, price elasticity, taxable share, and substitution, allowing for sensitivity analyses.
- The group agreed to using extreme values and case studies (e.g., Philippines, Colombia) to illustrate the range of possible impacts
- Decision: method presented is ok, separate out but make sure tax is 20% on HFSS foods since that is the recommended policy

Total sodium intake

- Assume the increase in packaged food comes from a decrease in discretionary; adjust sources accordingly

Policy package reporting

- LSS is additive to the rest of the policies since it is the only one that acts on discretionary sources
- Decision: Agreed to represent scenario 2 for LSS—display at different levels of update: 10, 20, 30, 40, 50%

Timeline

- To Laura end of August before her OOO

Output

- David requested idea of tables and figures/outline needed—Zina will follow up over email

Follow up

- Define output/report needed including tables and figures (Zina to get back to UW)
- Sources breakdown for Nigeria (@Matti Marklund)
- Adjust sources so that total sodium intake is constant, and as packaged food sodium increases, discretionary decreases (@William R Garcia)
- Update LSS modeling based on discussion with Matti (@William R Garcia)
